

Project Evaluation and Selection Process

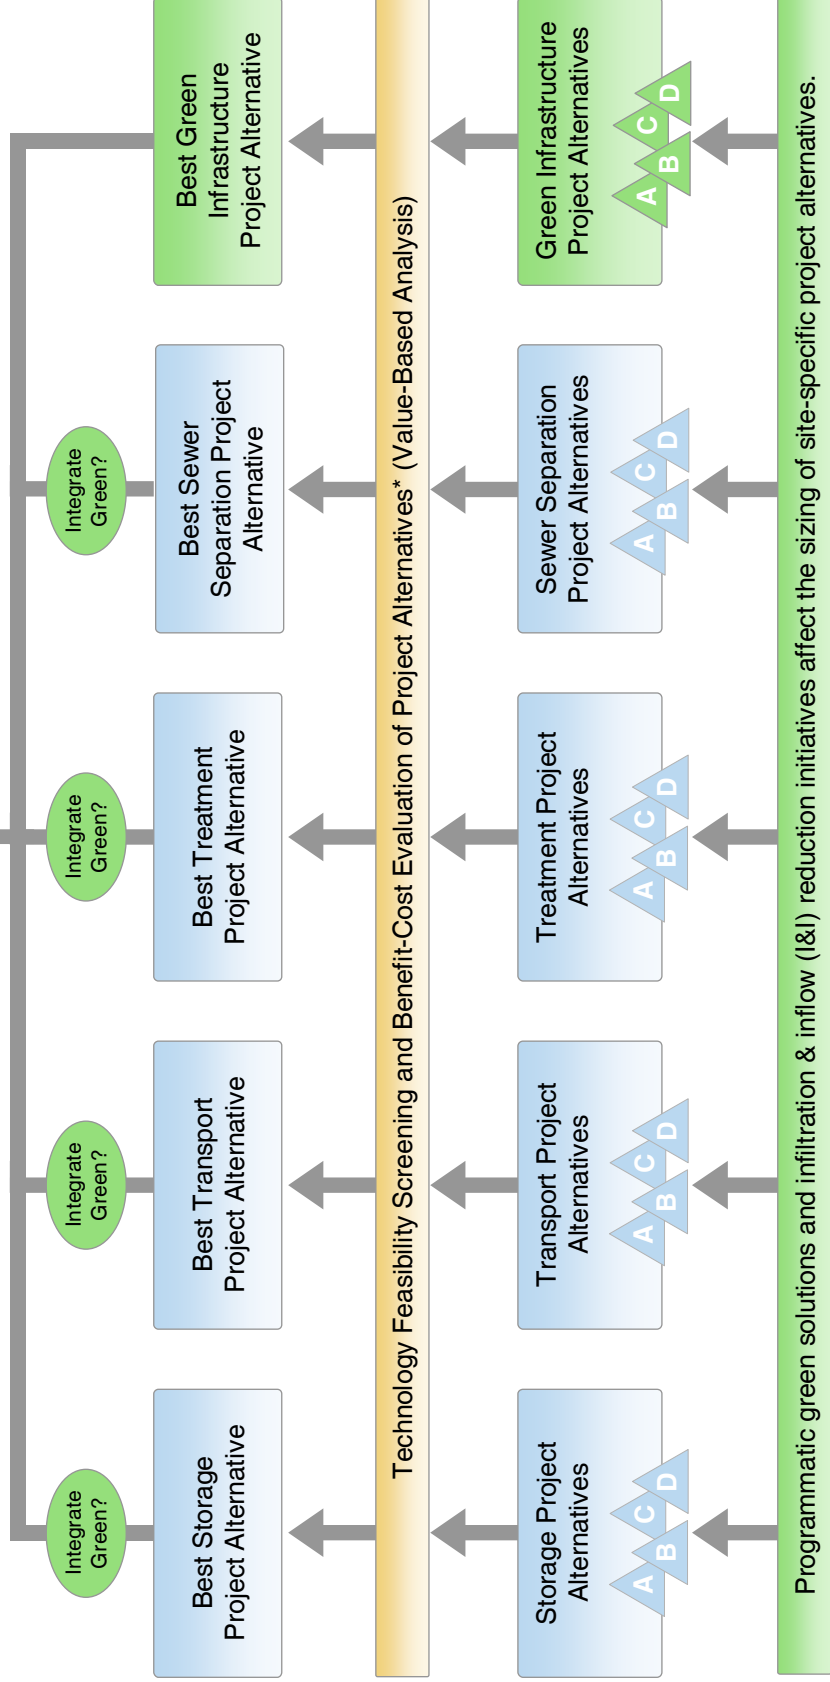

(Draft of 5/8/08)

The final project to address this CSO or SSO is added to the list of all final projects for MSD's Integrated Overflow Abatement Plan.

Compare benefit/cost results of different control levels to base case of 4 overflows per year for CSOs or a 2-year design storm for SSOs.

Best Project Alternative or Combination of Alternatives

Compare across technology options (not all options will be feasible for a given SSO/CSO location).
Pick the project alternative or combination of alternatives with the best benefit/cost ratio.

* Project alternatives can address single or multiple combined sewer overflow (CSO) or sanitary sewer overflow (SSO) locations.
